### DM Latch Bolt with Spring & Mounting Bracket (Part # S42955A00)

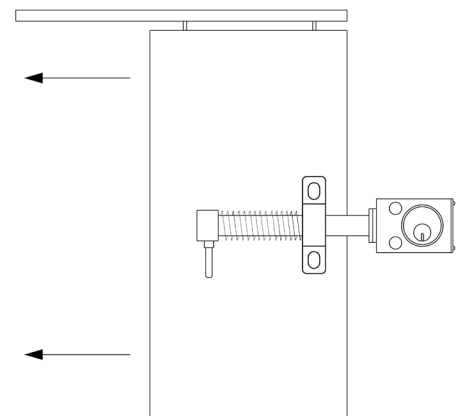

The optional Type DM latch bolt with spring and mounting bracket offers mounting alternatives for the Type DM Interlock. The mounting bracket is designed to hold the latch bolt in close proximity to the DM lock body. After inserting and turning the key, the latch bolt can be rotated 1/4 turn to be released from the lock – thereby trapping the key.

A sliding door or gate is a good application for this style of latch bolt.

All components of the S42955A00 DM latch bolt are made from electropolished 316 stainless steel.
